DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Paul Vargo on October 20, 2005.

The application has been amended as follows:

In claim 1, line 5: insert --; and which includes ingress path indicating elements coupled to the control circuits—after “hazardous condition”.

Claim 3 is canceled.

In claim 4, line 1: replace “as in claim 3” by “as in claim 1”.

In claim 15, line 7: insert --; and which includes third circuitry responsive to the at least one ingress path for activating a plurality of path indicating annunciations—after “predetermined condition”

Claim 23 is canceled.

In claim 24, line 1: replace “as in claim 23” by “as in claim 15”.

In claim 27, line 5: insert --; and providing ingress path indicators in the region—after “path into the region”.

Allowable Subject Matter

2. Claims 1-2, 4-19, 24-30 allowed, renumbered as 1-25.

3. The following is an examiner's statement of reasons for allowance:

There is no prior art teach or suggest a regional information system (**claim 1**) comprising:

A plurality of detectors for monitoring a region; a control circuitry coupled to the detectors, the control circuitry at least in part in response to indicia from the detectors, establishes at least one ingress path into a portion of the region indicated by at least some of the detectors, as being the location of a hazardous condition; and which includes ingress path indicating elements coupled to the control circuitry.

There is no prior art teach or suggest a path defining system (**claim 15**) adapted for use with a plurality of regional monitoring units, the system comprising:

First circuitry to receive inputs from members of a plurality of monitoring units; second circuitry, coupled to the first circuitry, the second circuitry processes a plurality of inputs received from the monitoring units, and responsive thereto determines at least one acceptable egress path for exiting a region while excluding at least one unacceptable path and, determines at least one, different ingress path leading to a predetermined condition; and which includes third circuitry responsive to the at least one ingress path for activating a plurality of path indicating annunciators.

There is no prior art teach or suggest a method (**claim 27**) comprising:

Receiving a plurality of condition indicating signals from a group of different sources associated with a region; evaluating the signals, and, responsive thereto determining an egress path from and a different ingress path into the region; and providing ingress path indicators in the region.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lemelson et al. (US 6873256) disclose an "Intelligent Building Alarm".

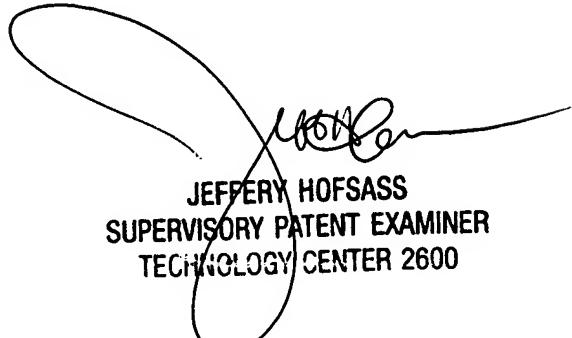

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
